EDUCATION

Northwestern University Expected 2028
Bachelor of Science in Computer Science | Major GPA: 3.67
Relevant Coursework: Data Structures & Algorithms, Intro to Computer Systems, Programming in Systems-Level Languages, Applied Data Management, Computer Game Design and Development

EXPERIENCE

Willie's Wallet Mar. 2026 – Present
Software Engineer | React Native, Expo, TypeScript, FastAPI, Supabase

- Led App Store releases for a React Native/Expo discount app with 100+ downloads and 20+ partner businesses, spanning mobile UI, payments, and maintenance.
- Implemented Supabase OAuth, JWT verification for a FastAPI REST API, and a RevenueCat subscription paywall.

Northwestern University Oct. 2025 – Present
Front-End Developer – Web Accessibility | HTML, CSS, JavaScript

- Resolved approximately 500 accessibility issue occurrences identified by Siteimprove across Northwestern websites in a university work-study role.
- Updated HTML, CSS, and JavaScript across multiple pages to correct link text, image alternatives, iframe titles, and heading structure.

New Trier Township Food Pantry Jan. 2026 – Jun. 2026
Full-Stack Software Engineer | React.js, Node.js, Express, PostgreSQL, Firebase, Supabase

- Deployed an inventory platform with a six-person team, turning weekly client meetings into requirements, Figma designs, and React/Express features.
- Implemented atomic PostgreSQL upserts for scan-in quantities and transactional row locking for checkout; fixed a missing-authentication path that bypassed volunteer-session validation.

Cargoline Express Jul. 2024 – Aug. 2025
Full-Stack Software Engineer | React, Node.js, MySQL, RESTful APIs

- Rebuilt a legacy cargo CRM with React, Node.js, MySQL, and RESTful APIs after its QuickBooks integration failed, restoring employee and accountant workflows.
- Automated transfer of CRM data into QuickBooks form fields, replacing employees' manual re-entry of records.

PROJECTS

SubSplit | Next.js, React, TypeScript, Prisma, PostgreSQL, Stripe | *Hackathon Project*

- Built a subscription-sharing marketplace at a hackathon where users create groups, browse 90+ plans, and pay individual shares through Stripe.
- Implemented split rules, billing-cycle tracking, prorations, refunds, and idempotent payment handling across 36 API routes.

Dendritic Learning | Swift, Firebase | *Apr. 2024*

- Built and released a Swift/Firebase study app to the School App Store with flowchart-style study sets; used Apple Vision to recognize handwritten answers and check them against expected responses.
- Won the District 214 App Showcase and presented Dendritic Learning at Apple Michigan Avenue.

nuPython | C | *Course Project*

- Implemented memory and execution modules in C for nuPython, a Python-subset interpreter, using provided scanner, parser, and program-graph components.
- Implemented variable storage, expression evaluation, type conversions, conditionals, and while loops to execute programs written in the supported Python subset.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Python, C, C++, C#, Swift, SQL, HTML/CSS
Technologies: React, React Native, Next.js, Node.js, FastAPI, PostgreSQL, MySQL, Supabase, Firebase, Git
